Michael has extensive experience in the data industry, Michael has developed his expertise in data engineering, ETL processes, and testing, working across a broad range of technologies and industries. He is skilled in SQL, ETL/ELT, cloud and on-prem solutions, and data warehouse methodologies, and has experience troubleshooting issues, providing production support, and optimising data systems.

18+ years in data engineering and testing, with expertise in SQL, ETL, and Snowflake, particularly in banking projects.

Led Prescribed Transaction Reporting (PTR) testing at ANZ, managing test SQL, ETL test data, defect resolution, and collaborating with stakeholders to address documentation gaps.

Extensive experience in data warehouse testing at Inland Revenue New Zealand, including complex data ingestion, processing, and Snowflake migration.

Currently a Senior Data Engineer at Heartland, focusing on ETL development using Snowflake Cloud and DBT.

Writes SQL for data extraction, resolves user-reported issues, and develops new functionalities within Snowflake Cloud.

Strong foundation in test environment management, defect tracking, and ensuring data integrity across platforms.

Availability: Need to give a 4-week notice period

Right to work in NZ: NZ Citizen
